Client (Browser/Mobile/Rest Client/Desktop Application

RequestResolver class performs controller role to forward http Requests to corresponding methods –

- 1. Load all annotations
- 2. Identify methods and corresponding annotation mapping
- 3. If requests matches pattern served by our application, forward it to corresponding Resource Class (ProductsResource, PriceResource)

Forward requests to Resource containers

- ProductsResource Has all methods to process products related rest requests
 - o getProducts
 - o addProduct
 - o deleteProduct
 - o searchProductByName
- PriceResource Has all methods to process price related rest requests
 - o getPriceById
